

“Lumen: Learning Uplift for Modern Educational Networks”

A Project Report

Submitted by

Rasamsetti Gnana Prudhvi || AP23110010542

Vuppu Kishore || AP23110010563

Navanit Reddy Turpinti || AP23110010578

Under the supervision of

Mr. Srikanth Lukka

Assistant Professor

Department of Computer Science and Engineering

SRM University-AP

In partial fulfilment for the requirements of the project for the course:

Course Code: CSE 210

Course Name: Web Technologies

Bachelor of Technology in Computer Science and Engineering

Department of Computer Science and Engineering

SRM University-AP

Neerukonda, Mangalagiri

Andhra Pradesh, India - 522503

April 2025

CERTIFICATE

This is to certify that the project work entitled “Lumen: Learning Uplift for Modern Educational Networks” is a Bonafide record of project work carried out by the following students:

- **Rasamsetti Gnana Prudhvi** (AP23110010542)
- **Vuppu Kishore** (AP23110010563)
- **Navanit Reddy Turpinti** (AP23110010578)

from the

Department of Computer Science and Engineering, SRM University-AP.

The students conducted this project work under my supervision during the period **January 2025 to April 2024**. It is further certified that, to the best of my knowledge, this project has not previously formed the basis for the award of any degree or any similar title to this or any other candidate.

This is also to certify that the project work represents the teamwork of the candidates.

Station: Mangalagiri

Date:

Mr. Srikanth Lukka

Assistant Professor

Department of Computer Science & Engineering

SRM University-AP

Andhra Pradesh

Introduction

The project titled LUMEN (Learning Uplift for Modern Educational Networks) is a comprehensive “Student Information System” designed to streamline the academic and administrative

processes of an educational institution. LUMEN is a centralized, relational database-driven application that addresses the growing need for structured and efficient management of student-related data in universities and colleges.

Managing student information manually or through fragmented systems often leads to inefficiencies, data loss, and miscommunication. To address these challenges, LUMEN aims to provide a centralized platform that digitizes and automates the core functions of academic institutions.

The platform is designed to be accessible, secure, and intelligent. In the initial phase, the system manages student profiles, course enrollments, academic performance, and faculty assignments.

Problem Definition & Description

In the traditional educational environment, managing student data has long relied on manual record-keeping or file-based systems. While these methods may suffice in small-scale scenarios, they become inefficient, error-prone, and difficult to maintain as institutions grow and academic data becomes increasingly complex. Institutions often struggle with issues such as data redundancy, inconsistency, lack of security, and time-consuming access to student records.

With the increasing digitization of educational systems, there is an urgent need for a more efficient, secure, and scalable solution that can handle large volumes of academic and administrative data.

Concluding, Institutions today handle vast student data, but often lack an integrated approach to manage it effectively. Key issues include:

- **Data fragmentation:** Different departments maintain separate records without synchronization.
- **Redundancy and inconsistency:** Manual entries often lead to duplication and errors.
- **Limited accessibility:** Students and faculty may not have real-time access to important data.
- **No personalization:** Systems don't adapt to user needs or allow smart assistance.

These limitations create bottlenecks in both academic planning and student support services.

There is a growing need for a digital system that efficiently handles student-centric academic and administrative information while being intelligent, user-friendly, and scalable. An ideal solution should:

- Centralize all student-related data

- Offer role-based accessibility
- Track academic performance
- Provide intelligent assistance
- Maintain data integrity and security

LUMEN addresses this need by acting as a one-stop digital system for managing educational information.

Objectives

The main goals of LUMEN are:

- **Data Centralization:** Unify all student and faculty data into one system.
- **Accessibility:** Enable students and faculty to securely access relevant data at any time.
- **Automation:** Reduce manual workload by automating data entry, grading, and course management.
- **Performance Monitoring:** Allow real-time monitoring and update of grades, courses, and enrollment status.
- **Scalability:** Allow easy upgrades and integration with other systems like attendance, placements, and ERP.
- **Security:** Ensure secure logins, encrypted data handling, and scalability for future integrations.

Software Requirements Specifications

Functional Requirements:

- **Authentication System:** Role-based login system with secure password handling.
- **Dashboard Interface:** Personalized dashboards for each role.
- **CRUD Operations:** Create, Read, Update, Delete access to student, faculty, and course data.
- **Performance Analytics:** View academic performance with filtering and search features.

Non-Functional Requirements:

- **Usability:** Clean interface with responsive design principles.
- **Reliability:** Database transactions and backups ensure uptime and data preservation.
- **Performance:** Fast response time for queries and record access.
- **Security:** SQL injection prevention, HTTPS protocols (future), and access control mechanisms.
- **Portability:** Designed to be deployable across different university networks or intranets.

Technology Stack:

- **Frontend:** HTML5, CSS3, JavaScript
- **Server-scripting:** PHP
- **Database:** MySQL
- **Development Tools:** Visual Studio Code, XAMPP (local server), draw.io

DFD Diagram: LUMEN

Flow Chart: LUMEN

Screen layout: LUMEN

The screenshot shows a web browser window with the URL `localhost/lumen/login.php`. The page is split into two main sections. The left section has a solid pink background and contains the text "Welcome to LUMEN" in white, followed by the "lumen" logo in black. Below the logo, it says "Learning Uplift for Modern Educational Networks". The right section has a light gray background and is titled "Sign In". It contains two input fields: "Email" with the value `alex.johnson@lumen.edu.in` and "Password" with masked characters. A pink "Sign In" button is at the bottom of the form.

This screenshot is identical to the one above, showing the LUMEN login page. The email field now contains the value `hari@lumen.edu.in`, while the rest of the page layout and content remain the same.

This page serves as the starting point of the Virtual Classroom platform. User signups are managed internally — login credentials will be created and provided by the system administrator. Students, faculty, and other users must use the assigned credentials to access their personalized dashboards and services within the platform.

Dashboard

This page is the Dashboard, where users can view their active courses, completed courses, upcoming tests, and currently available resources. Announcements made by the faculty regarding assignments and other important updates will also be displayed here.

My Learnings

The screenshot shows the 'My Learnings' dashboard for a user named Hari. The dashboard includes a sidebar with navigation links: Dashboard, My Learnings (active), My Activity, Tests, Schedule, Settings, and Help Center. The main content area displays four summary cards: 3 Active Courses, 2 Lessons Completed, 0 Certificates Earned, and 65% Learning Progress. Below these is a 'Learning Progress' section with tabs for Active Courses, Completed, and Saved for Later. It lists two courses: 'Machine Learning Basics' (2 Lessons, 0 Completed, 80% Complete) and 'Python Programming' (2 Lessons, 2 Completed, 65% Complete).

Course	Lessons	Completed	Progress
Machine Learning Basics	2	0	80% Complete
Python Programming	2	2	65% Complete

This screenshot shows the 'My Learnings' dashboard with the 'Learning Resources' section expanded. It lists three resources: 'Web Dev Resources' (Modern web development technologies), 'Python Guide' (Complete Python programming guide), and 'ML Handbook' (Comprehensive machine learning handbook). The 'Learning Progress' section is partially visible above, showing 'Python Programming' at 65% and 'Web Technologies' at 50% completion.

Resource	Description
Web Dev Resources	Modern web development technologies
Python Guide	Complete Python programming guide
ML Handbook	Comprehensive machine learning handbook

This screenshot shows the 'My Learnings' dashboard with the 'Recent Activity' section expanded. It lists two activities: 'quiz_attempt' (Duration: 25 minutes, Score: 92, Dec 2, 2023 3:00 PM) and 'course_access' (Duration: 60 minutes, Dec 1, 2023 2:00 PM). The 'Learning Resources' section is visible above, showing the same three resources as the previous screenshot.

Activity	Duration	Score	Timestamp
quiz_attempt	25 minutes	92	Dec 2, 2023 3:00 PM
course_access	60 minutes	-	Dec 1, 2023 2:00 PM

This page displays the active courses, lessons completed, the number of certificates earned, and the overall learning progress percentage at the top.

Below that, it shows a list of active courses, completed courses, and courses saved for later.

For each active course, the progress percentage is shown, indicating how much of the course has been completed.

Below the course progress, available resources related to the active courses are displayed, followed by the recent activity and updates within those courses.

My Activity

This page is the My Activity section. It shows the student's active courses, the total minutes spent across all courses, the number of completed courses, and the average score achieved in tests.

Below that, it displays the student's skill certifications and badges earned.

The page also highlights the student's weekly growth, with a graphical representation of skill development and an activity breakdown chart.

Tests

Schedule

This page is the Schedule section.

It displays a calendar view showing the current month and highlights important dates.

Below the calendar, it lists any upcoming events and provides the student's Weekly Class Schedule.

Students can view their scheduled tasks and assignments for the week, next week, or for all classes.

This section helps students stay organized and manage their coursework effectively.

Settings

This page is the Settings section.

It displays the user's profile information, including name, email, and enrolled courses.

Progress bars show the completion status for each enrolled course.

Under the Privacy tab, users can manage their account actions, including the option to log out securely from the platform.

Help Center

DataBase

This section shows a database table viewer. It displays the data organized in rows and columns, allowing you to see the contents of a specific table within your database.

This section displays the interface for interacting with the "announcement" table. It likely shows the structure of this table, including the columns designed to store announcement details, and might also allow for viewing or editing existing announcements.

DataBase: LUMEN

This section displays the structure and content of the "class_schedules" table within the database. It shows the columns of the table, such as 'id', 'Title', 'day_of_week', 'start_time', 'end_time', 'location', and 'instructor_id'.

This section displays the interface for interacting with the "announcement" table. It likely shows the structure of this table, including the columns designed to store announcement details, and might also allow for viewing or editing existing announcements.

The screenshot shows the phpMyAdmin interface with the 'courses' table selected. The table structure and data are as follows:

id	name	category	title	description	instructor_id	image_url	course_type
1	NULL	NULL	Cloud Computing Fundamentals	Learn the basics of cloud computing and infrastruc...	3	uploads/cloud.jpg	NULL
2	NULL	NULL	Database Management	Master database design and implementation	4	uploads/database.jpg	NULL
3	NULL	NULL	Machine Learning Basics	Introduction to ML, concepts and applications	17	uploads/ml.jpg	NULL
4	NULL	NULL	Python Programming	Learn Python from scratch	18	uploads/python.jpg	NULL
5	NULL	NULL	Cybersecurity Essentials	Understanding security fundamentals	19	uploads/security.jpg	NULL
6	NULL	NULL	Web Technologies	Modern web development technologies	20	uploads/web_technology.jpg	NULL

The courses table stores details about the available courses, including the course name, category, title, description, instructor, image, and course type. It currently contains six records with some fields like category_id marked as NULL.

The screenshot shows the phpMyAdmin interface with the 'events' table selected. The table structure and data are as follows:

id	title	description	event_date	start_time	end_time	event_type	location	instructor_id	course_id
1	Cloud Infrastructure Workshop	Hands-on workshop for AWS cloud setup	2024-03-20	09:00:00	11:00:00	workshop	Lab 101	3	1
2	AWS Services Overview	Introduction to AWS services	2024-03-22	10:00:00	12:00:00	lecture	Room 301	3	1
3	Database Design Project	Final project presentation	2024-03-21	14:00:00	16:00:00	assignment	Room 202	4	2
4	SQL Query Optimization	Advanced query optimization techniques	2024-03-23	13:00:00	15:00:00	workshop	Lab 202	4	2
5	Network Security Analysis	Network security practical session	2024-03-24	11:00:00	13:00:00	workshop	Lab 401	19	5
6	Encryption Protocols Study	Overview of encryption methods	2024-03-25	15:00:00	17:00:00	lecture	Room 401	19	5

The course_contents table manages the content details for each course, including the topic name, description, video link, duration, and associated course ID. It currently contains multiple entries linked to different courses.

The event_attendees table from the lumen_database database was accessed using phpMyAdmin. A SELECT * FROM event_attendees query was executed, but the table returned an empty result set, indicating that no records are currently stored.

The table structure includes the following columns: id, event_id, user_id, status, and created_at.

The learning Resources from courses table from the lumen_database database was accessed using phpMyAdmin.

A SELECT * FROM courses query was executed, and multiple course records were retrieved.

The table contains columns like id, name, and description.

The screenshot shows the phpMyAdmin interface with the 'tasks' table selected. The table has the following columns: id, user_id, course_id, title, due_date, priority, status, and created_at. The data is as follows:

id	user_id	course_id	title	due_date	priority	status	created_at
1	1	1	Cloud Infrastructure Setup Lab	2024-03-20	high	pending	2025-04-27 21:50:07
2	1	1	AWS Services Overview Assignment	2024-03-22	medium	pending	2025-04-27 21:50:07
3	1	2	Database Normalization Exercise	2024-03-21	medium	pending	2025-04-27 21:50:07

16	3	3	Model Training Exercise	2024-03-23	medium	pending	2025-04-27 21:50:07
17	3	5	Penetration Testing Basics	2024-03-24	high	pending	2025-04-27 21:50:07
18	3	5	Security Audit Report	2024-03-25	medium	pending	2025-04-27 21:50:07

The tasks table stores information about user tasks related to different courses. It has columns such as id (integer, primary key), user_id (integer, foreign key), course_id (integer, foreign key), title (varchar/string), due_date (date), priority (varchar/string), status (varchar/string), and created_at (timestamp). This table records the title of each task, links tasks to users and courses, tracks when tasks are due, sets their priority level (like medium or high), shows the current status (such as pending), and timestamps when they were created.

The screenshot shows the phpMyAdmin interface with the 'tests' table selected. The table has the following columns: id, course_id, title, and questions. The data is as follows:

id	course_id	title	questions
1	1	Cloud Computing Assessment	NULL
2	2	Database Concepts Test	NULL
3	3	Machine Learning Quiz	NULL
4	4	Python Programming Test	NULL
5	5	Security Fundamentals Quiz	NULL
6	6	Web Development Assessment	NULL

The tests table stores information about different tests linked to courses. It contains columns such as id (integer, primary key), course_id (integer, foreign key), title (varchar/string), and question_ids (text or varchar). This table records the title of each test, associates tests with specific courses, and keeps the IDs of the questions included in each test.

The screenshot shows the phpMyAdmin interface for the 'lumen' database. The 'users' table is selected, and its structure is displayed. The table has the following columns: id, name, email, password, role, and profile_photo. The data is as follows:

id	name	email	password	role	profile_photo
1	Alex Johnson	alex.johnson@lumen.edu.in	password123	Student	Alex_img.jpg
2	Hari	hari@lumen.edu.in	password456	Student	hari_img.jpg
3	Sarah Williams	sarah.williams@lumen.edu.in	password789	Professor	default.jpg
4	David Kumar	david.kumar@lumen.edu.in	password101	Professor	default.jpg
17	Michael Chen	michael.c@lumen.edu.in	password125	Professor	default.jpg
18	Emily Rodriguez	emily.r@lumen.edu.in	password126	Professor	default.jpg
19	James Anderson	james.a@lumen.edu.in	password127	Professor	default.jpg
20	Srikanth Lukka	Srikanth.L@lumen.edu.in	password128	Professor	default.jpg

The users table stores user account information. It includes columns like id (integer, primary key), name (varchar/string), email (varchar/string, unique), password (varchar/string), role (varchar/string), and profile_image (varchar/string). This table saves each user's name, email address, encrypted password, their role in the system (such as student or instructor), and the filename or path to their profile image.

The screenshot shows the phpMyAdmin interface for the 'lumen' database. The 'user_activities' table is selected, and its structure is displayed. The table has the following columns: id, user_id, activity_type, activity_date, duration_minutes, completion_status, and score. The data is as follows:

id	user_id	activity_type	activity_date	duration_minutes	completion_status	score
1	1	course_access	2023-12-01 10:00:00	45	completed	NULL
2	1	quiz_attempt	2023-12-02 11:00:00	30	completed	85.5
3	2	course_access	2023-12-01 14:00:00	60	in_progress	NULL
4	2	quiz_attempt	2023-12-02 15:00:00	25	completed	92

The user_activities table stores information related to user activities. It contains columns like id (integer, primary key), user_id (integer, foreign key), activity_type (varchar/string), activity_date (date), duration_minutes (integer), completion_status (varchar/string), and score (integer or nullable). This table records which user performed which activity, the date of the activity, how long it lasted, its completion status (such as completed or in progress), and the score achieved if applicable.

Future Scope

Integration with Learning Management Systems (LMS):

The system can be expanded to integrate with LMS platforms for assignment submissions, attendance tracking, and e-learning content management.

Advanced Analytics and Reporting:

Implement AI-based predictive analytics to forecast student performance and recommend personalized learning paths.

Mobile Application Development:

Develop a mobile app version for students, faculty, and administrators to access the system on the go with push notifications.

Cloud Deployment:

Transition the system from local hosting to cloud servers for better scalability, reliability, and remote access.

Multi-Factor Authentication (MFA):

Enhance security by adding MFA options like OTPs, biometrics, or authenticator apps for login processes.

Role Expansion:

Introduce additional roles such as parents, alumni, and external examiners with customized dashboard access.

Automated Backup and Recovery Systems:

Implement automated cloud-based backup solutions to ensure zero data loss during system failures.
